

Monthly District Performance Update for Maternal and Child Nutrition Services

April 2023

Prof. Dr. Mijanur Rahman
Line Director
National Nutrition Services (NNS)

8/7/2023

Key Highlights: Maternal and Child Nutrition Services

Maternal Nutrition Services (DLR 13.4)

- On average, 5.99 women were registered in April per CC across the 15 districts.
- Feni, Moulvibazar, and Habiganj achieved the **highest ranking for DLR 13.4** (proportion and number of registered pregnant women who received all three services).
- The least performing districts were Brahmanbaria, Khagrachhari, and Bandarban.
- The district with the least zero-reporting CCs were Moulvibazar, Chandpur, and Habigonj.

Child Nutrition Services (DLR 14.4)

- On average, 7.17 children were registered in April per CC across the 15 districts.
- Rangamati, Chandpur, and Khagrachhari achieved the **highest ranking for DLR 14.4** (number of registered children (0-23 months) eligible to receive age-appropriate nutrition counselling).
- The least performing districts were Sunamgonj, Cox's Bazar, and Bandarban.
- The district with the least zero-reporting CCs were Chandpur, Moulvibazar, and Habigonj.

Maternal Nutrition Services (DLR 13.4)

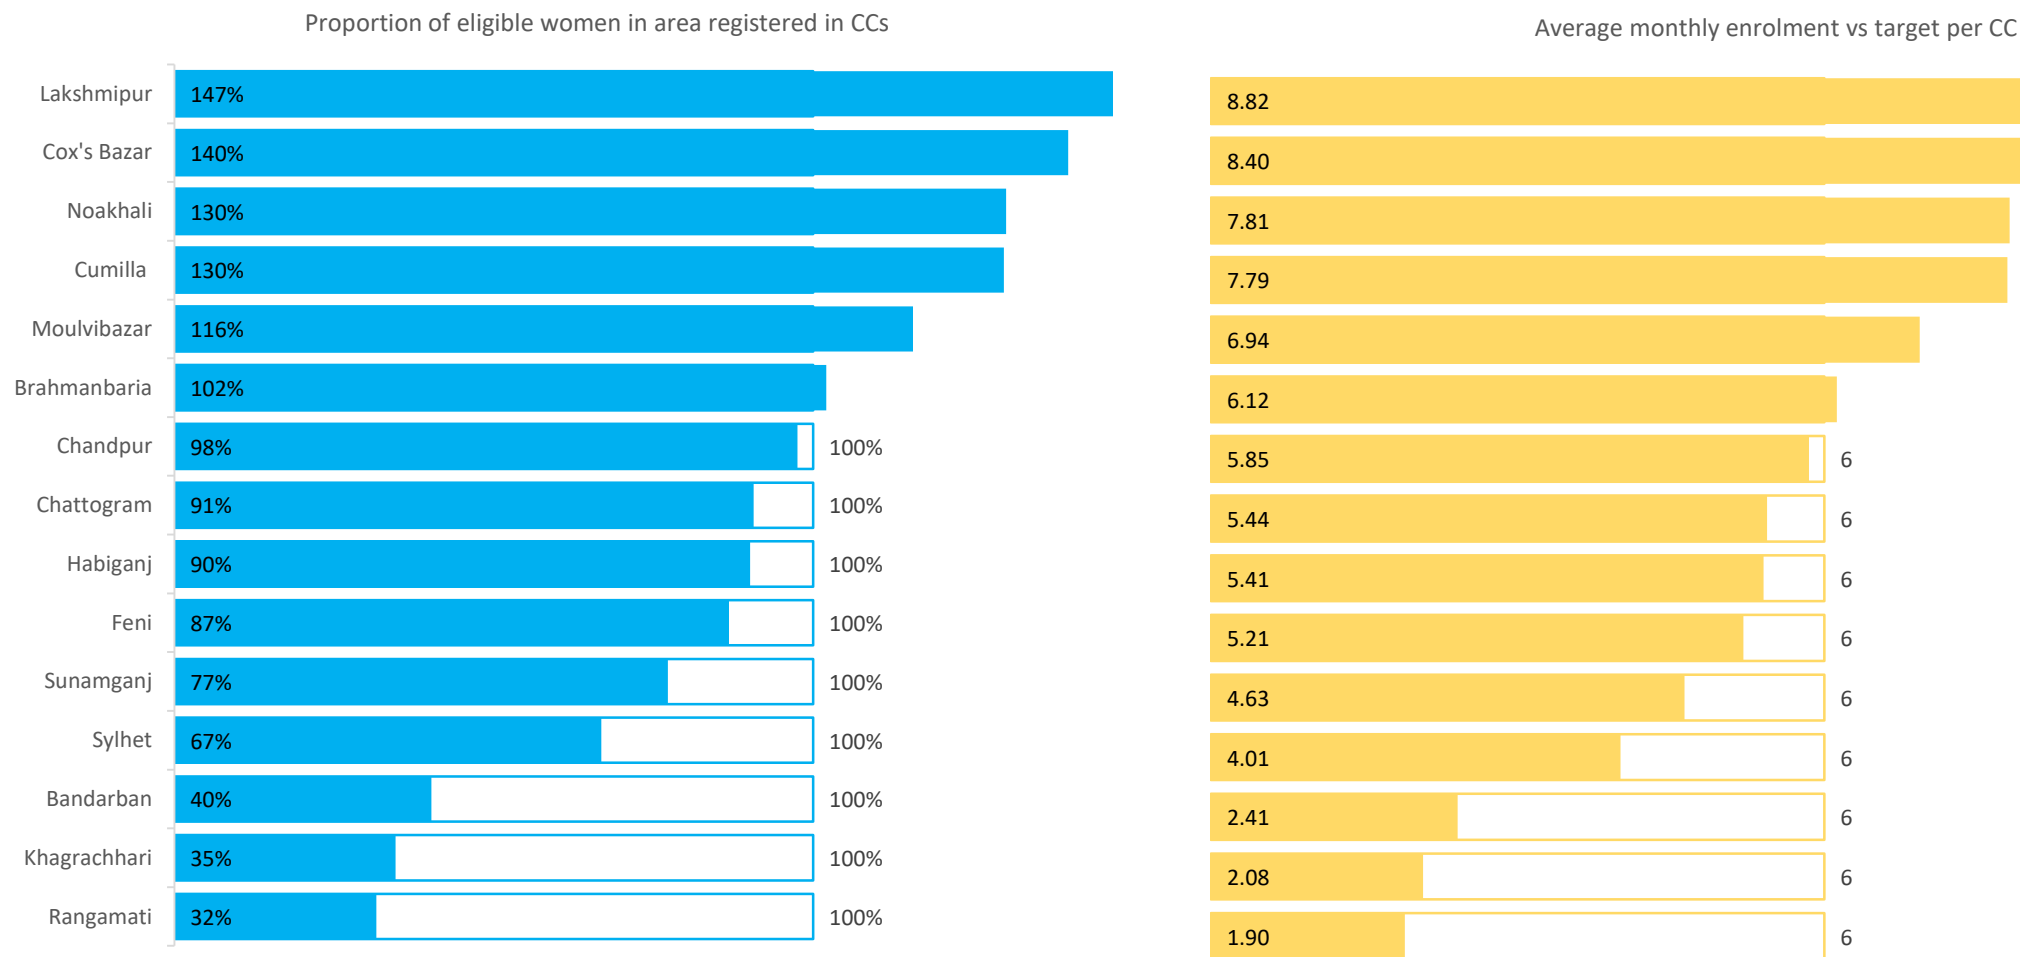

Proportion and number of registered pregnant women who received all three services (weight measurement, at least 30 IFA tablets and nutrition counselling)

Note: Figures show the district level performance of providing nutrition services to pregnant women. The panel on the left (yellow) shows the proportion of registered pregnant women who have received all three nutrition services. The panel on the right (green) shows the total number of registered pregnant women versus those who received all three nutrition services.

Maternal Nutrition Services (DLR 13.4)

Coverage ^{1,2} of eligible pregnant women in CC catchment areas

Note: Figures show district level performance of the CCs in reaching eligible pregnant women within their catchment areas. The panel on the left (blue) show the proportion of pregnant women who have been registered for services. The panel on the right (yellow) shows the average number of new eligible pregnant women registered per CC in each district.

¹ Coverage is calculated as "100% - % Out of Service"

² It is expected that each CC registers six pregnant women on average per month.

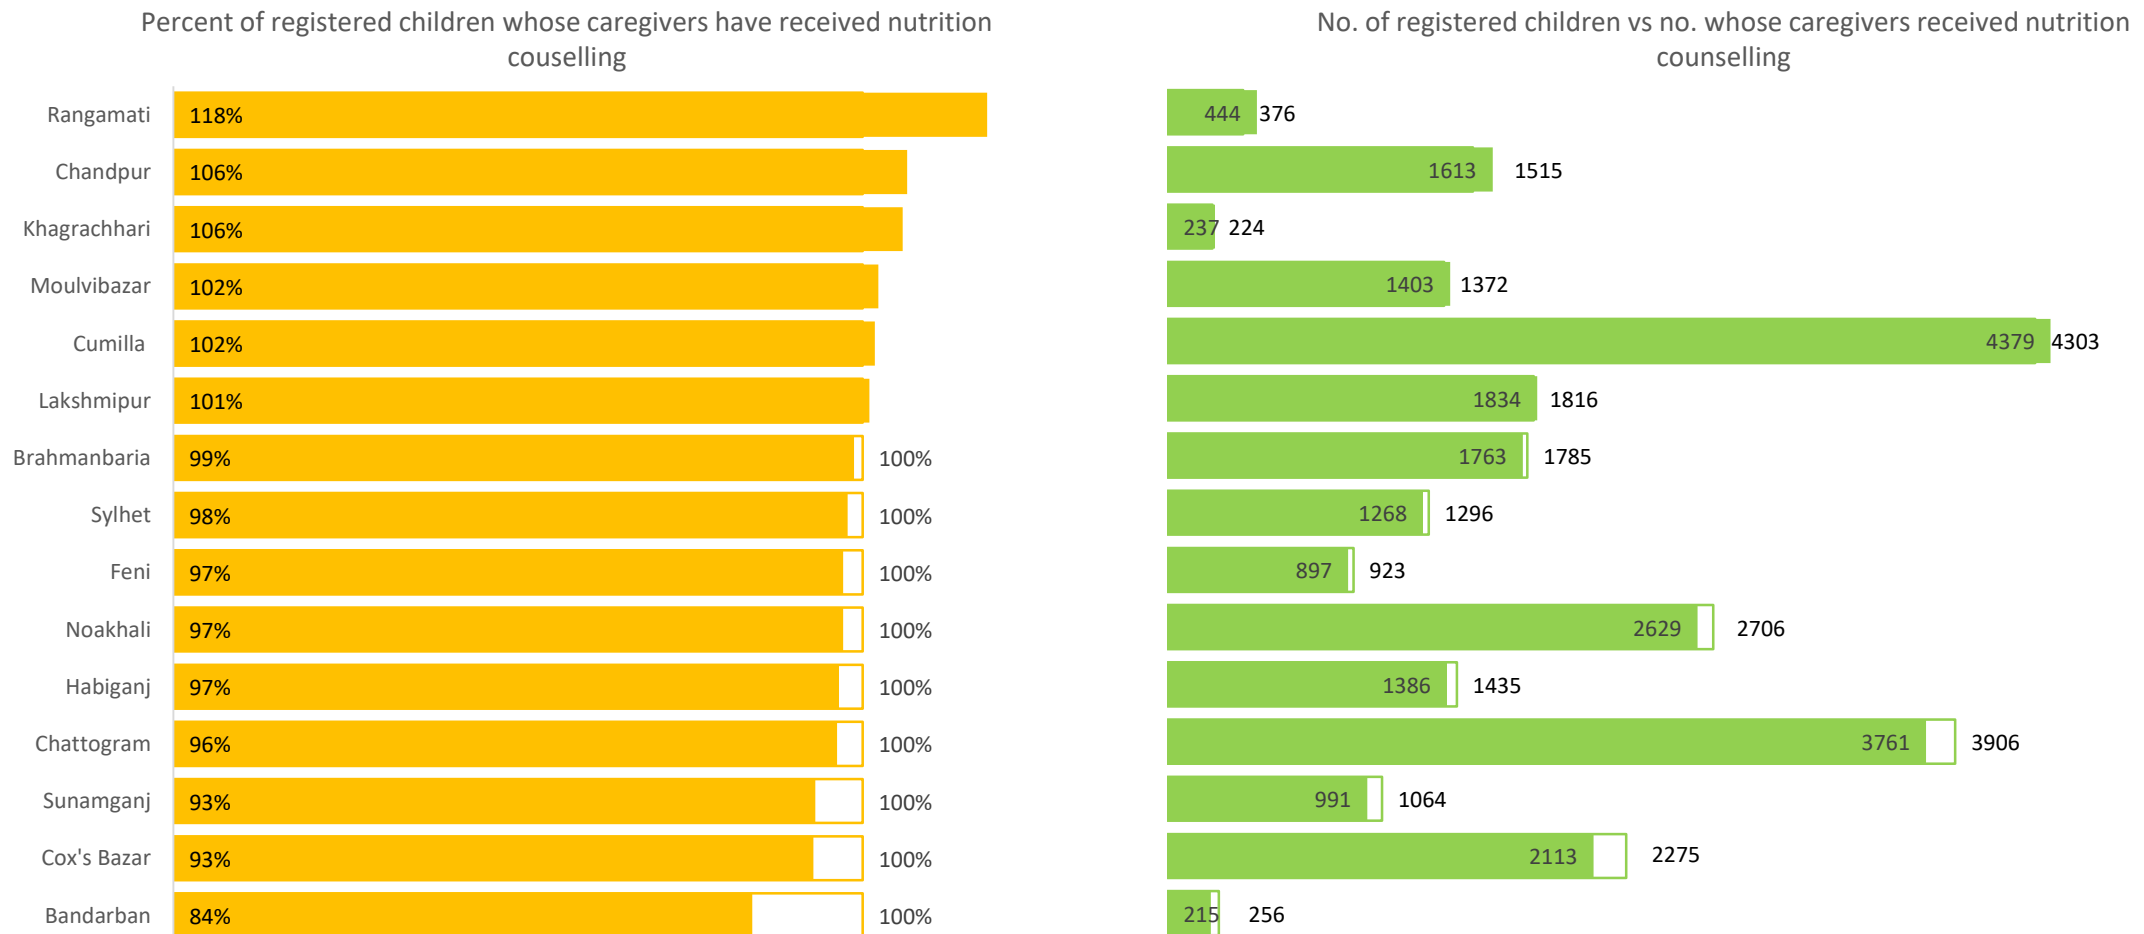

Trends in Maternal Nutrition Services (DLR 13.4 - %)

Overall, the DLR has been improving relatively consistently over time, as shown by the dotted trend line.

Child Nutrition Services (DLR 14.4)

Number of registered children (0-23 months) eligible to receive age-appropriate nutrition counselling³

³ Proportion of children served is potentially biased upwards. Some children may have received more than one service (across months) against each new registration, thereby driving the proportion of services delivered beyond 100%.

Note: Figure shows the number of eligible children registered across the districts to receive age-appropriate nutrition counselling services.

Child Nutrition Services (DLR 14.4)

Coverage^{4,5} of eligible children (0-23 months) in CC catchment areas

Note: Figures show district level performance of the CCs in reaching eligible children within their catchment areas. The panel on the left (blue) show the proportion of children who have been registered for services. The panel on the right (yellow) shows the average number of eligible children registered per CC in each district.

⁴ Coverage is calculated as "100% - % Out of Service"

⁵ It is expected that each CC registers six children on average per month.

Trends in Child Nutrition Services (DLR 14.4 - %)

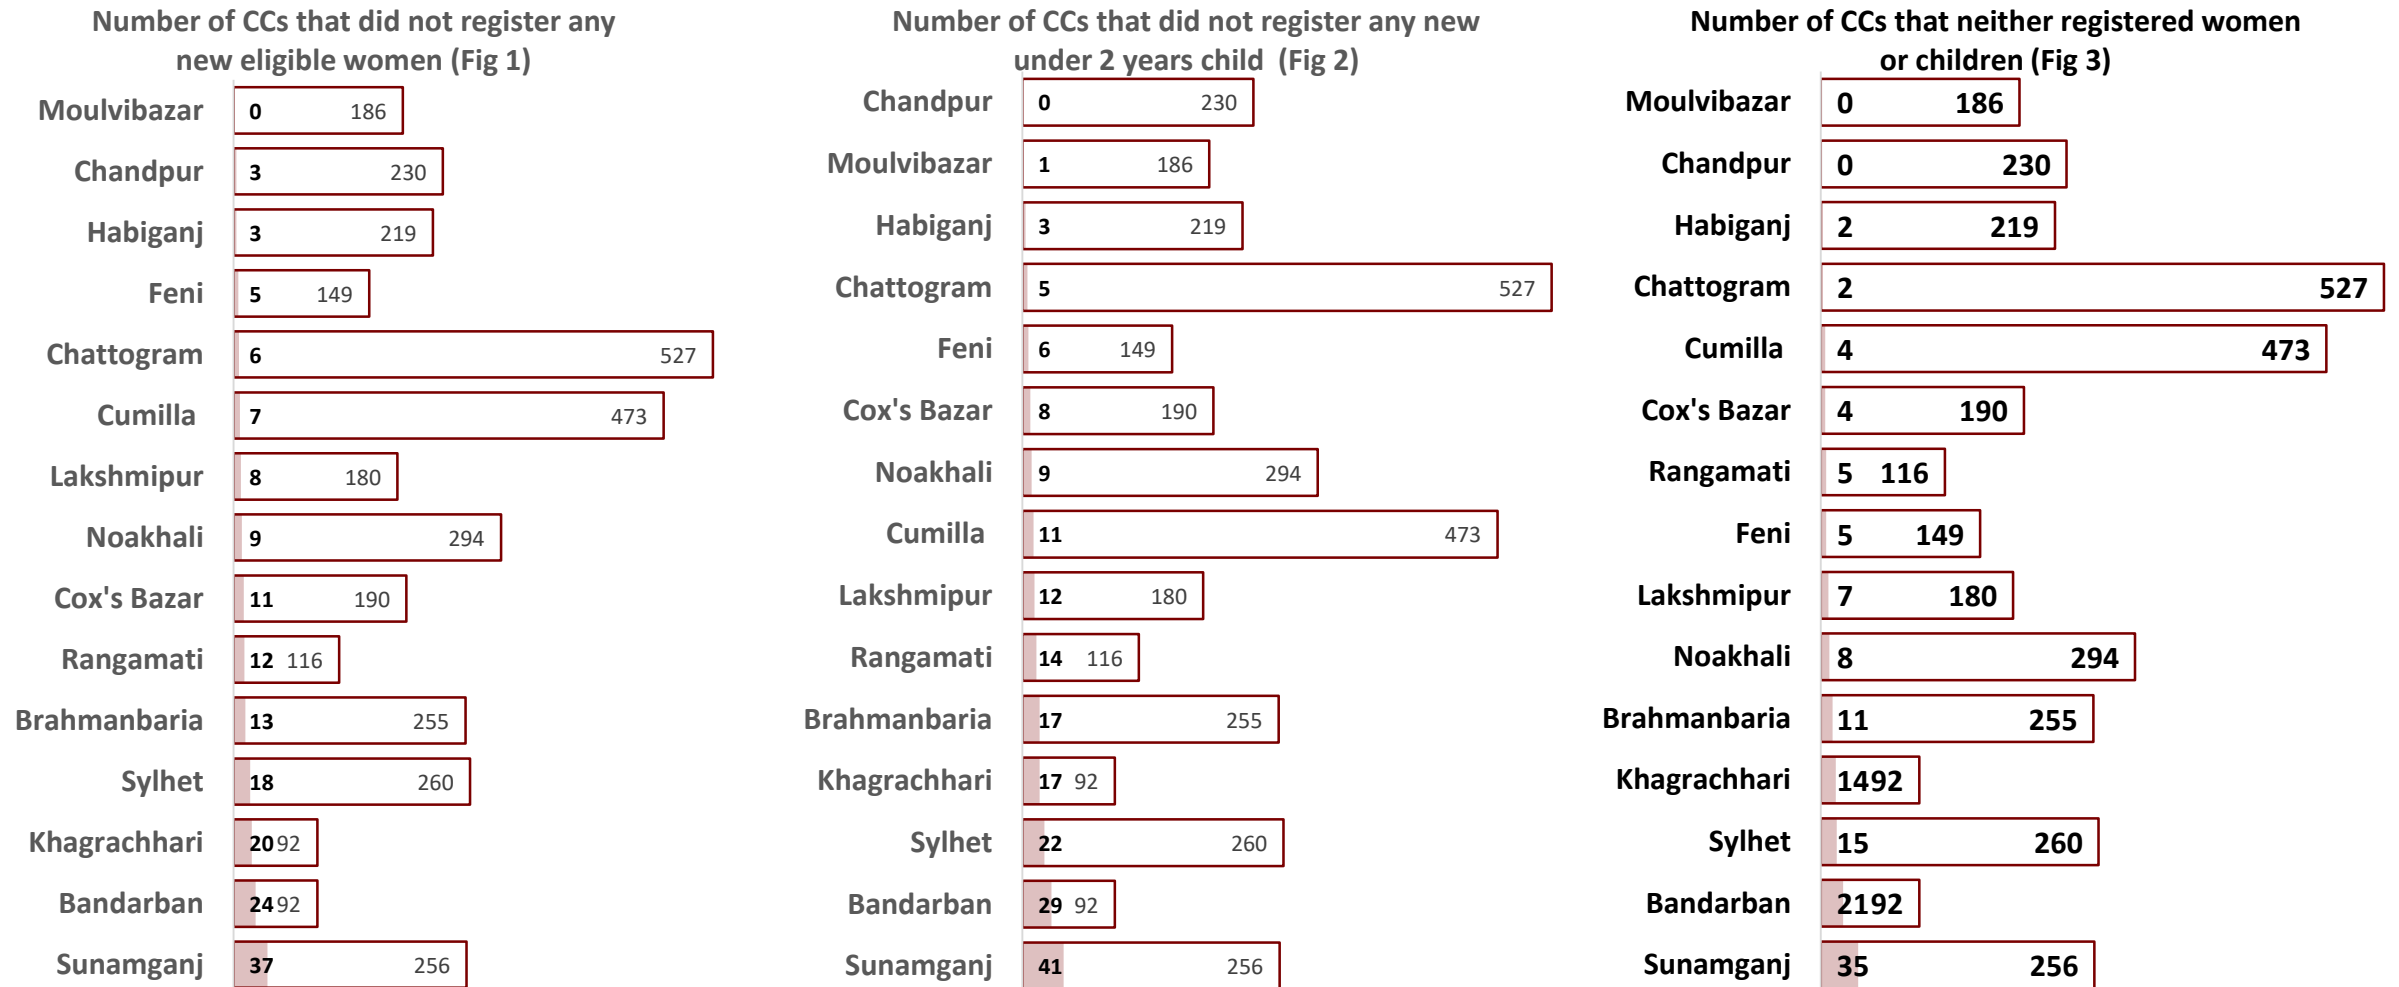

Overall, the DLR improving relatively over time, as reflected by the dotted trend line.

Proportion of children served is potentially biased upwards. Some children may have received more than one service (across months) against each new registration, thereby driving the proportion of services delivered beyond 100%.

Community Clinics with Zero Reporting

Number of CCs that did not register any new eligible pregnant women or children to receive nutrition services for the reporting month of April 2023

Note: Figures report the number of CCs that did not register any new eligible pregnant women (Fig 1); new children under 2 years of age (Fig 2); and neither any new pregnant women or children (Fig 3)

Thank you

Annexure: Historical Trends

Trends in Maternal Nutrition Services (DLR 13.4 – Absolute numbers)

The number of mothers registered and served has decreased in April 2023

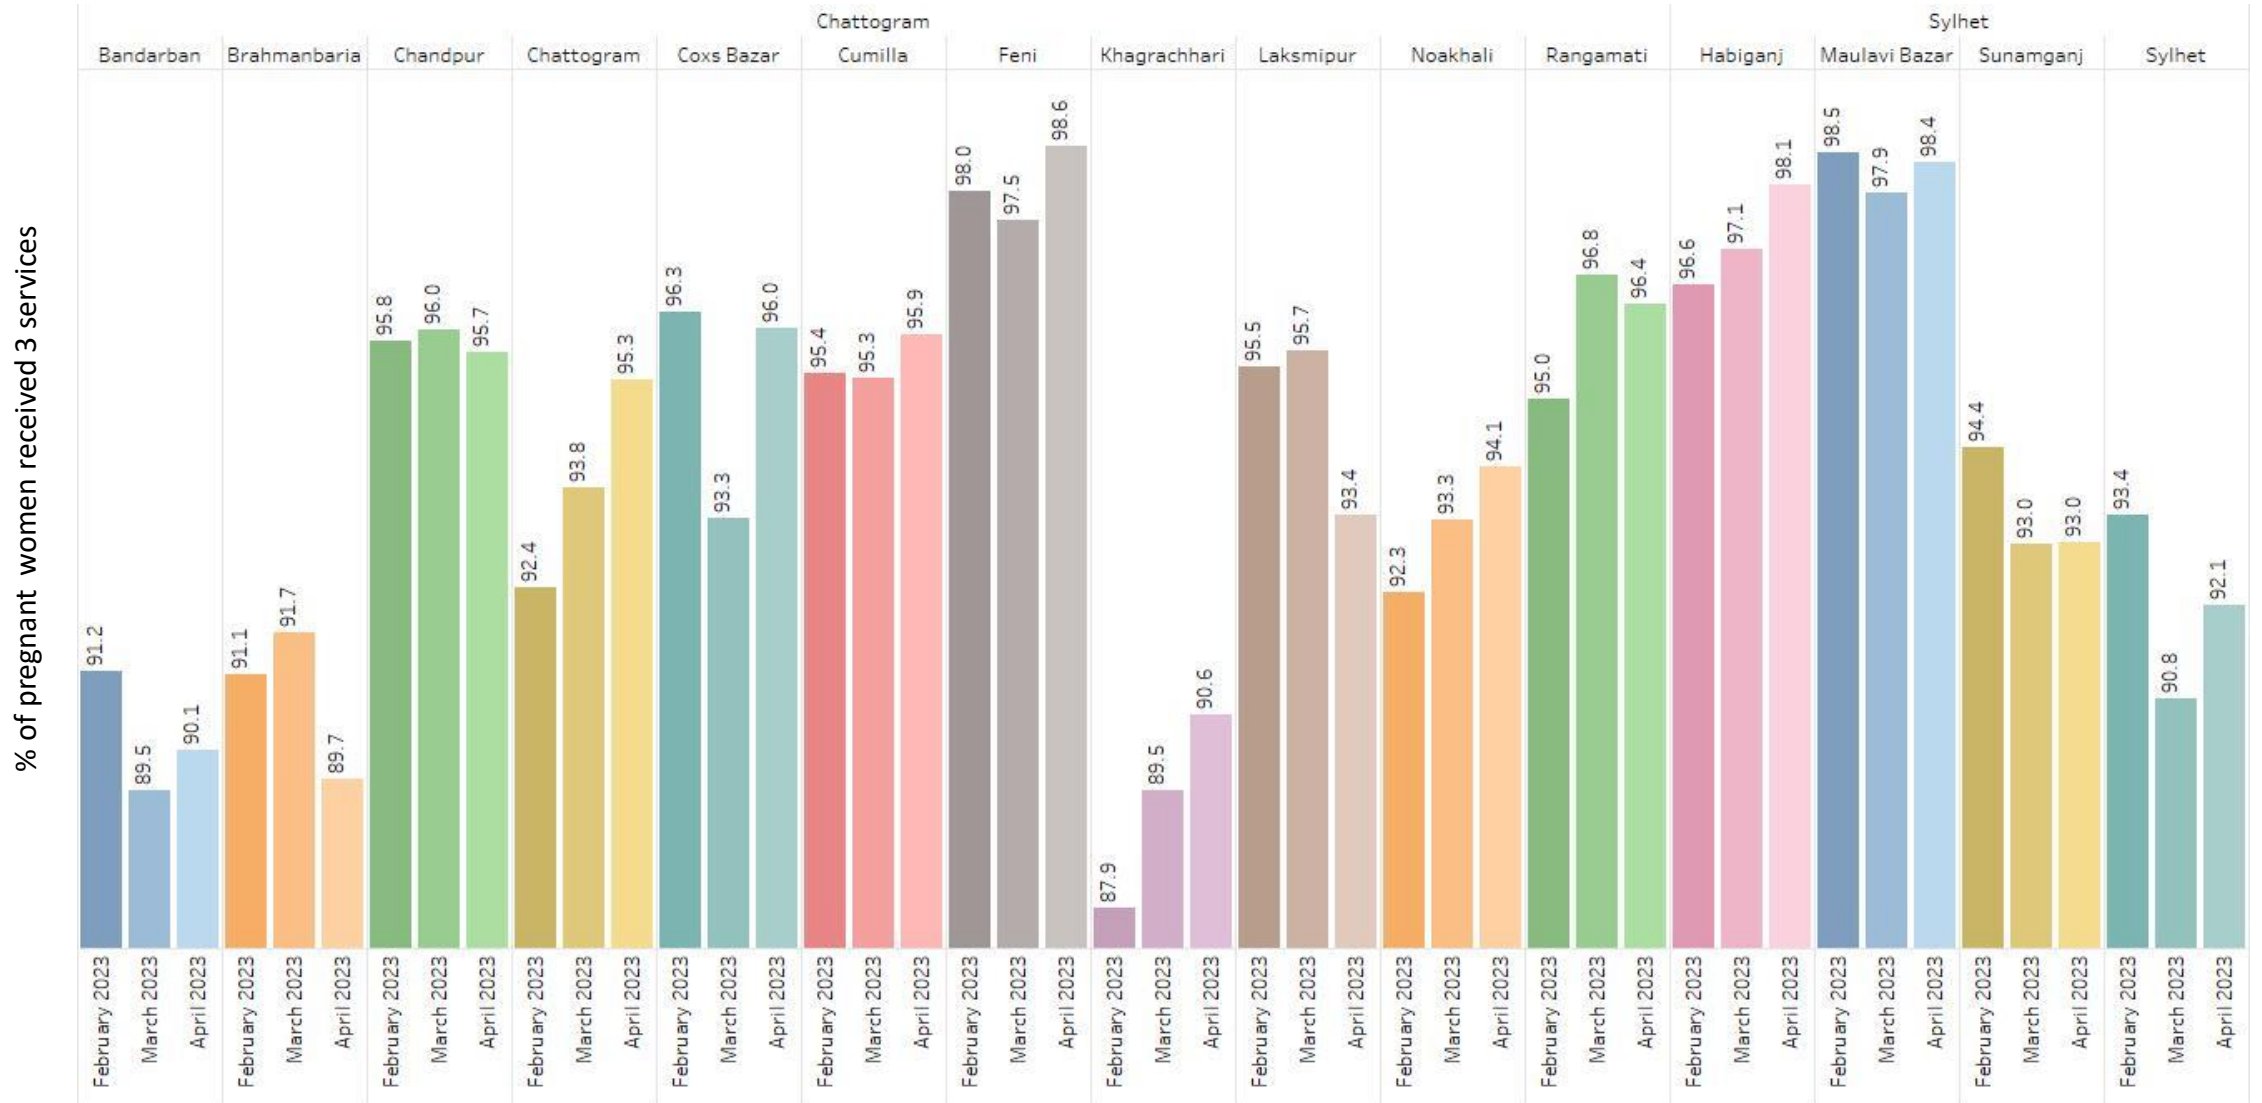

Trends in Child Nutrition Services (DLR 14.4 – Absolute numbers)

Overall, the number of children registered and served has decreased in April 2023

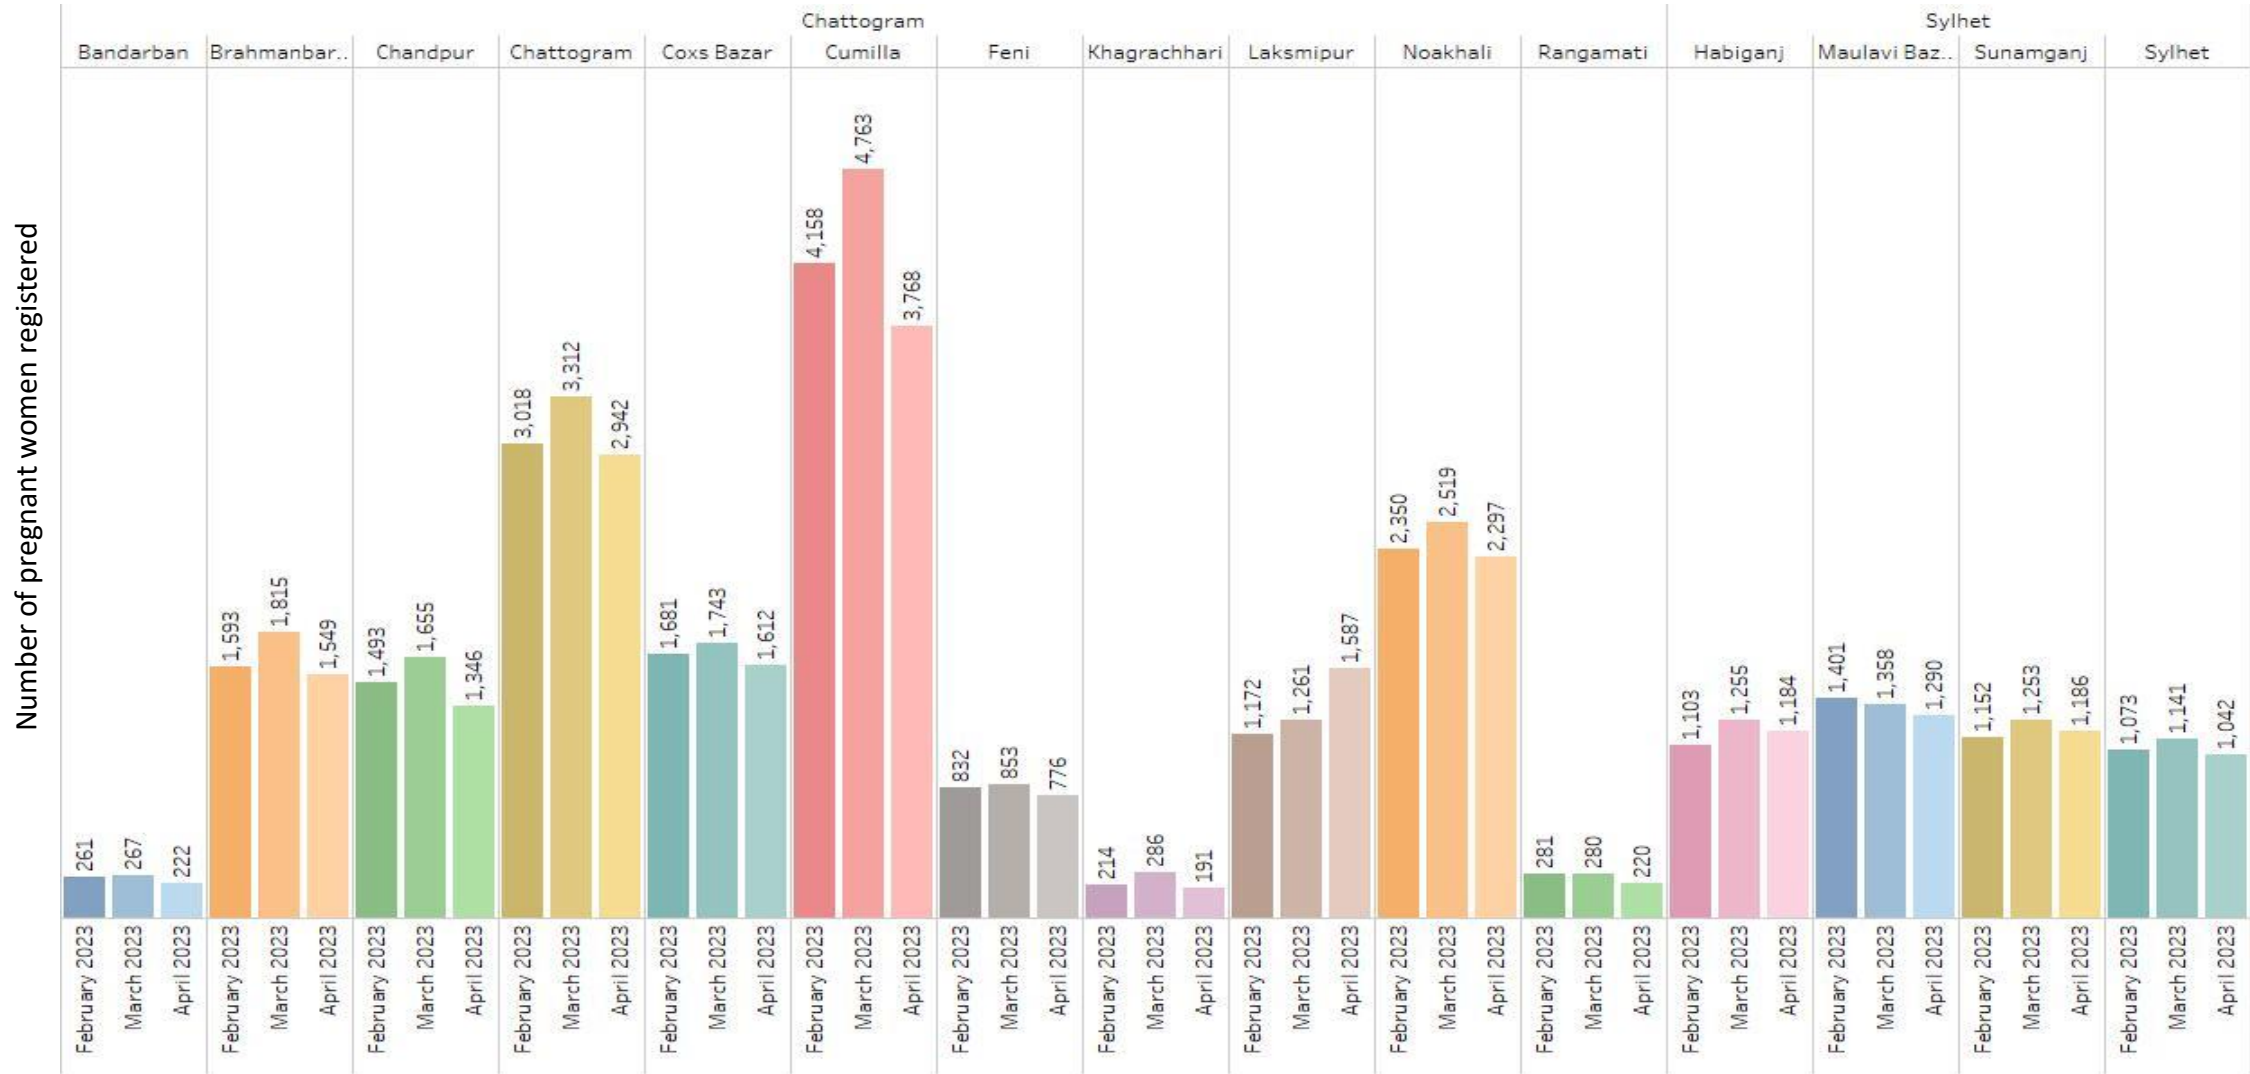

Trends in Maternal Nutrition Services (DLR 13.4) (February to April 2023)

A little more than half the districts experienced an increase in DLR 13.4 compared to the two previous months.

Trends in Maternal Registration (February to April 2023)

Majority of the districts reported a decrease in the number of pregnant women registered for services in April.

Trends in Zero-reporting CCs (Maternal Services, February to April 2023)

The majority of districts reported a decrease in the number of zero-reporting CCs in April than the previous month.

Trends of Child Nutrition Services (DLR 14.4) (February to April, 2023)

Overall trends remained consistent with the two preceding months

Proportion of children served is potentially biased upwards. Some children may have received more than one service (across months) against each new registration, thereby driving the proportion of services delivered beyond 100%.

Trends of Child Nutrition Services (DLR 14.4) (February to April, 2023)

Overall trends remained consistent with the two preceding months

Number of children registered (under 2 years of age)

Trends in Zero-reporting CCs (Child Nutrition Services, February to April 2023)

Most of the districts reported a decline in the number of zero-reporting CCs in April than earlier months.
